

Ener**G**+

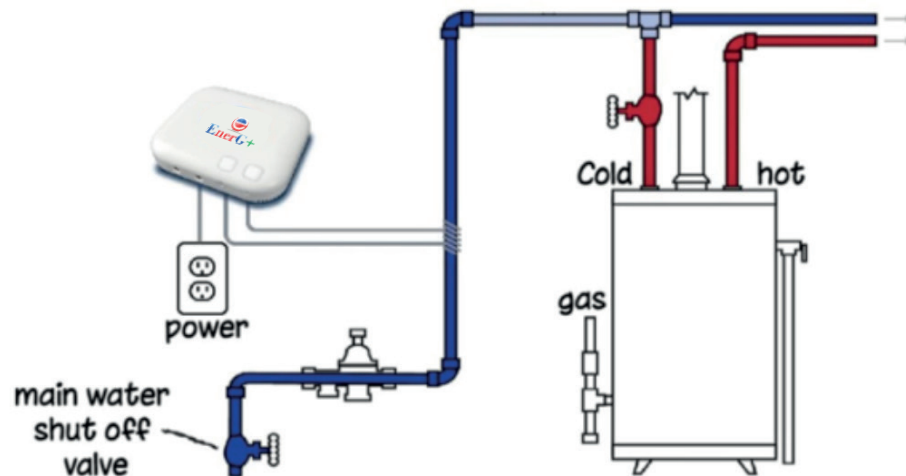

Energy Saver

ELECTRONIC WATER CONDITIONER

EnerG+

An electronic water conditioner is an efficient way to significantly reduce existing and prevent future calcium build up on existing water pipes. It creates a magnetic and electric field with high-speed pulse that creates nano bubbles that line the inside of the pipe and does not allow a scale. As hard water is removed, water pressure increases and It helps eliminate existing scale and stops the accumulation of new scale in pipes, heating elements and any other surface.

How it works?

Clean the pipes leaving them free of calcium

REFRIGERATION

FRIDGE SAVER

Designed to monitor the temperature of your product inside of your cooling system and to ensure it cools within the accepted product temperature guidelines, saving up to 30% of the energy costs.

Energy Saver

Savings up
to 30% on
energy
consumption

AIR CONDITIONING AND REFRIGERATION ENERGY SAVING ADDITIVE RESTORE 1030

Optimize the system in 3 different ways

1. Through the elimination of oil incrustations. This elimination restores the loss of 20-30% in the heat transfer capacity, allowing a better contact of the coolant with the coils. In addition, the unit is protected against future oil incrustations during the life of the system.

2. The second optimization causes the refrigerant to evaporate or "boil" at a higher temperature. The cumulative effect of these two components working together results in a 73% improvement in heat transfer capacity.

3. It increases the lubricity and increases the performance of the compressor oil. The tenacious union maintains the properties of friction reduction even when the oil is not present. In addition, there is less wear and tear on the equipment; Extending the useful life of the equipment and decreasing maintenance costs.

consumption

ENERGY SAVING ADDITIVE FOR CHILLER WATER SYSTEMS

RAPID CHILL

An energy saving additive that can be installed in any cooler or boiler system. The water is used in cooling systems and boilers because it is cost effective and easily available, however, water is not the more efficient heat conveyor.

% Our additive reduces tension water surface by 60%, which produces an effect significant in the overall efficiency of system, achieving 15% to 30% Energy Saving

AIR CONDITIONERS AIRCOSAVER

It is energy saving update device that Makes older A / C units smarter. The A / C unit will work more efficiently, and It will consume less energy during cooling.

BENEFITS:

- It is an electronic control unit that adds intelligence to simple air conditioning systems and improve your energy efficiency
- It is 100% designed and manufactured in Germany with the most High quality standards

%

Up to 30%
savings on
energy
consumption

AIR CONDITIONERS AIRCON

It is a revolutionary control unit that produces energy savings of up to 30% in Most air conditioning units. Due to the variable weather it is virtually impossible for systems air conditioned to operate at optimal efficiency.

BENEFITS:

- Return on investment in a few months
- Save energy 24/7
- Extends the life cycle of the compressor
- Improves the cooling capacity of the compressor
