Re: The Betterair technology

As a Medical Practitioner in the field of Plastic surgery, and extensive experience since 2006, both in public service and in the private sector, I have witnessed many disinfection / purification technologies that have come and gone but Pathogenic microbes always overcame and found ways to survive and inflict illnesses and death.

As my team and I spend most of our time in a confined space having limited ventilation, and in addition treating dozens of patients on a daily basis, it was important for us to make sure that we are doing our utmost to enable a healthy environment free of pathogens and allergens, without risking any of the inhabitant's health.

Learning about Betterair's unique technology back in mid-2019 and understanding the benefits of a technology that collaborates with nature instead of going against it by treating the environment using probiotics, I asked the company to perform an efficacy trial at my private surgery clinic before considering full implementation.

After a very successful trial which surpassed my expectations, I am relieved to acknowledge the fact that after a year and a half of Betterair's Environmental Probiotic technology Implementation, I can provide a healthy and balanced microbial environment for my clinic staff as well as for my patients.

The implementation of Betterair's probiotic purification devices has contributed dramatically to the reduction of pathogens, as well as assisted to the overall well-being of both our staff and patients.

With respect

Azaria Ron M.D.
